Demo content

Everything here goes into **production** and is permanent. These are drafts shaped for an Accounts audience — replace the codes with your own convention and have the Accounts head confirm the wording before the demo. Anything in *italics* only you can fill in.

1. Policy

Create first. A process cannot be approved without a policy to sit under.

Field	Value
Code	`POL-ACC-RECON`
Name	Client Funds and Reconciliation Policy
Category	Finance and Accounts
Owner	*Accounts head*
Approver	*CFO or Compliance head — not the same person as the owner*
Review frequency	12 months
Review lead time	20 days

The owner and approver being different people is not enforced by the system, but an auditor will look for it. Set them apart.

2. Process

Field	Value
Code	`PROC-BANK-RECON`
Name	Daily bank reconciliation
Control objective	Every client and own bank account is reconciled to the books each working day, and breaks are escalated the same day.
Owner	*Accounts manager*

Field	Value
Policy	`POL-ACC-RECON`
Review frequency	12 months

A second one, if you want the compliance refusal in Part 1b:

Field	Value
Code	`PROC-CLIENT-FUNDS`
Name	Monthly client funds and securities reporting
Control objective	*Confirm the exact reporting obligation with Compliance before typing this.*
Policy	`POL-ACC-RECON`

3. Desk card

Field	Value
Code	`ACC-RECON-01`
Name	Accounts — Reconciliation desk
Department	ACCOUNTS
Holder	*a real person in Accounts, who can sign in*

Activity one — approves cleanly

Field	Value
Title	Daily bank reconciliation
Task type	`OPERATIONAL`
Priority	Medium
Recurrence	Daily
Estimated effort	45 minutes
Serves	`PROC-BANK-RECON`

Activity two — refuses, on purpose

Field	Value
Title	Monthly client funds and securities reporting
Task type	`COMPLIANCE`
Priority	High
Recurrence	Monthly
Serves	`PROC-CLIENT-FUNDS`

Approving this one is refused until a procedure is written and a second person approves it. That refusal is the point — do not fix it during the demo.

4. Task

Field	Value
Title	Reconcile *[bank]* client settlement account — *[date]*
Task type	`OPERATIONAL`
Priority	Medium
Due date	*a real date in the next week*
Assignee	*the Executive playing the role*

Field	Value
Reviewer	*the Dept Head*
Estimated effort	45 minutes

Checklist:

- [ ] Download the bank statement for the day
- [ ] Match credits and debits against the ledger
- [ ] List unmatched entries with their value dates
- [ ] Escalate any break to the Accounts head

Dictated comment, spoken in Gujarati or Hindi — something true, for example that two entries are still unmatched and the bank has been asked for the advice.

5. Project

Field	Value
Code	*your convention, e.g.* `ACC-AUDIT-FY27`
Name	Statutory audit FY 2026-27 — Accounts workstream
Owner	*Accounts head*
Sponsor	*MD*
Project manager	*Accounts manager*
Start date	*real*
Target end date	*real*

Milestones

Milestone	Target date
Trial balance frozen	*real*
Schedules submitted to auditors	*real*
Audit queries closed	*real*
Accounts placed before the Board	*real*

Mark complete only the ones genuinely done.

Risk

Field	Value
Title	*a real one — for example, unreconciled breaks from the last settlement cycle*
Description	*one honest sentence*
Blocking	*only if it truly is*

One real amber beats a clean green board. The MD will ask why everything is green otherwise.

RACI

Role	Person
Accountable	*Accounts head — exactly one, enforced*
Responsible	*Accounts manager*
Consulted	*Compliance*
Informed	*MD*

Decision — the MD's moment

Field	Value
Title	Approve the audit timetable and the cut-off date for schedules
Description	*the two or three dates actually in question*
Approver	**MD**
Driver	*Accounts manager*
Contributor	*Accounts head*
Informed	*Compliance*

The MD types the outcome himself and clicks Decide. Nobody else can.

Before you type any of it

- [ ] Accounts head has read and approved this content
- [ ] Codes match your existing convention
- [ ] Every named person can sign in
- [ ] Dates are real
- [ ] Nothing says TEST anywhere
